

SinkOS Privacy Policy

SinkOS V2 Privacy Policy

Last updated: [Insert Date]

This Privacy Policy explains how SinkOS (“we,” “us,” “our,” “SinkOS”) collects, uses, stores, and protects information when you use SinkOS V2 and its modules, including Accounts, Camera, Gallery, Nexus AI, SinkOS Chat, SinkOS Calls, Sink Slides, and Sink Charts (collectively, the “Service”).

By using SinkOS, you agree to the collection and use of information as described in this policy.

1. Who We Are

SinkOS is a personal, browser-based operating system project. SinkOS is an independent personal project developed and maintained by an individual, not a company. The Service is hosted at [sinkos.net] and operates using Supabase as its backend infrastructure provider for authentication, database, and file storage.

2. Information We Collect

2.1 Account Information

When you create a SinkOS account, we collect: - Username - Password (stored as a hashed value — we never store or have access to your plaintext password) - Account creation date and related profile metadata - If you provide an email address, it may be used for account recovery or communication

2.2 Camera & Gallery

- Photos you capture using the Camera module are uploaded to private cloud storage and are only accessible to your account.
- Metadata associated with each photo (e.g., upload date, file size) is stored alongside the image.
- Photos are compressed client-side before upload to reduce file size; this compression happens on your device before any upload occurs.

2.3 Nexus AI

- Messages, prompts, and files (up to 4 per message) you send to Nexus are processed to generate a response.
- If you use Voice Mode, your speech is captured and transcribed to text in order to interact with Nexus.
- Conversation history with Nexus is stored under your account so you can revisit past chats.
- Files you attach to Nexus conversations are stored in private cloud storage tied to your account.
- **Third-party AI processing:** Nexus messages and attachments are sent to Google’s Gemini API for processing. See Section 5 (Third-Party Services) below. Content sent to AI providers is not used to train their models beyond standard processing needed to generate a response.
- **Voice output:** If voice responses are enabled, text may be sent to a third-party

text-to-speech provider to generate spoken audio.

2.4 SinkOS Chat & Calls

- Messages you send through SinkOS Chat are stored so that conversations can be retrieved by participants.
- Friend requests, contact relationships, and presence status (e.g., online/offline) are stored to enable messaging and calling features.
- SinkOS Calls uses real-time peer-to-peer connections (WebRTC) for voice and video. Call content itself is not recorded or stored by SinkOS; however, connection metadata (e.g., call start/end signals) may be processed to establish the call.

2.5 Sink Slides & Sink Charts

- Presentations, spreadsheets, and associated project data you create are stored under your account.
- Any assets you upload (images, files) for use in Slides or Charts projects are stored in private cloud storage.

2.6 Automatically Collected Information

We may collect limited technical information necessary for the Service to function, such as session tokens and basic error/performance logs. Hosting providers may automatically log IP addresses for security and operational purposes. SinkOS does not use third-party advertising trackers.

3. How We Use Your Information

We use collected information to: - Create and maintain your account - Provide core functionality of each module (Camera, Gallery, Nexus, Chat, Calls, Slides, Charts) - Enable AI-generated responses through Nexus - Facilitate messaging and calling between users who have connected as friends - Maintain the security and integrity of the Service - Diagnose and fix technical issues

We may use aggregated, non-identifiable data to improve SinkOS performance and features.

We do not sell your personal information, and we do not use your content to train third-party AI models beyond standard processing needed to generate a response.

4. Data Storage & Security

- All account, message, file, and project data is stored using Supabase, with row-level security policies restricting access so that, in general, only you can access your own private data (photos, documents, conversations).
 - Passwords are hashed and never stored in plaintext.
 - Storage buckets containing photos, chat attachments, and documents are private by default and accessed only via authenticated, time-limited signed URLs.
 - Data is protected using industry-standard encryption in transit and at rest, as provided by our infrastructure provider.
 - While we take reasonable technical measures to protect your data, no system is 100% secure, and we cannot guarantee absolute security.
-

5. Third-Party Services

SinkOS relies on the following third-party service providers to operate:

Service	Purpose
Supabase	Authentication, database, and file storage
Google Gemini API	Processing messages and files sent to Nexus AI
Text-to-Speech Provider	Generating spoken audio for Nexus voice responses (if enabled)
Render	Hosting backend services (Nexus, ZERCA, Flux)
GitHub Pages	Hosting the SinkOS frontend

Information sent to these providers is subject to their own privacy policies, and we encourage you to review them. We only share the minimum data required for each service to function.

6. Data Retention

- Your account data, messages, photos, documents, and AI conversation history are retained for as long as your account remains active.
 - You may delete individual items (photos, documents, conversations) at any time through the relevant module.
 - If you delete your account, we will make reasonable efforts to delete your associated data, though some information may persist temporarily in backups before being fully purged.
 - Backup systems may retain deleted data for a short period before full removal, even for individual items deleted outside of account deletion.
-

7. Your Choices & Rights

You can: - Access, edit, or delete your account information at any time - Delete individual photos, documents, chats, or presentations you’ve created - Disable Voice Mode or file attachments in Nexus if you prefer not to use those features - Request a copy, export, or deletion of your data by contacting us (see Section 10)

8. Children’s Privacy

SinkOS is not intended for use by children under 13 (or the relevant minimum age in your jurisdiction) without appropriate parental guidance. We do not knowingly collect personal information from young children beyond what is necessary to operate the Service. If you believe a child has provided us with personal information inappropriately, please contact us so we can address it. Parents or guardians may request deletion of a child’s data if an account was created without appropriate consent.

9. Changes to This Policy

We may update this Privacy Policy from time to time as SinkOS evolves and new modules are added. We will update the “Last updated” date at the top of this page when changes are made. Continued use of the Service after changes constitutes acceptance of the updated policy.

10. Contact

If you have questions about this Privacy Policy or your data, contact us at: **[Insert**

This Privacy Policy is a general-purpose template intended for a personal/independent software project and does not constitute legal advice. If SinkOS grows to handle sensitive data at scale or serve users in regions with specific regulatory requirements (e.g., GDPR, COPPA, CCPA), consider having this document reviewed by a legal professional.
