

Rav's Enrichment Project 2026

Sink OS

VERSION 1.0

What is an OS?

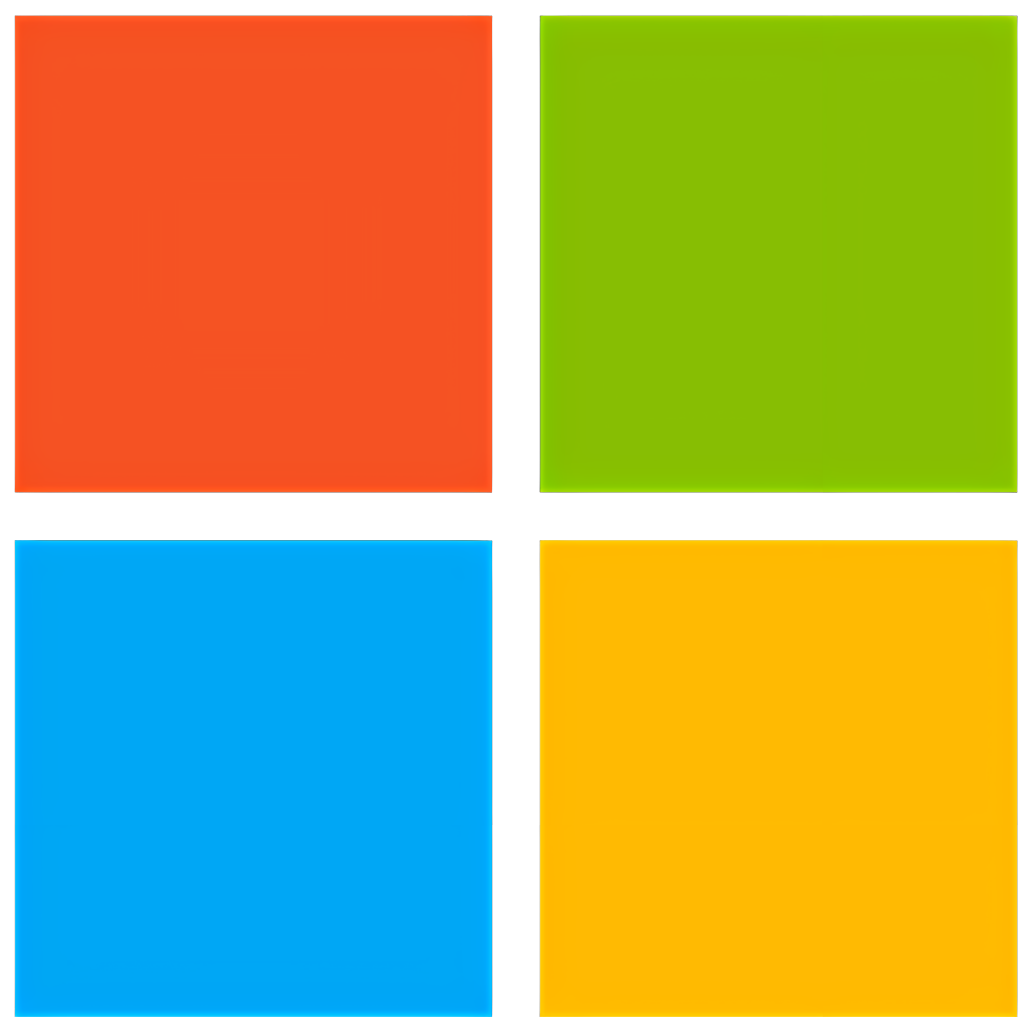

An Operating System (OS) is the foundational, omnipresent, hyper-complex, multi-layered software ecosystem that acts as the supreme commander, traffic controller, translator, negotiator, security guard, librarian, scheduler, and behaviorist for every single component

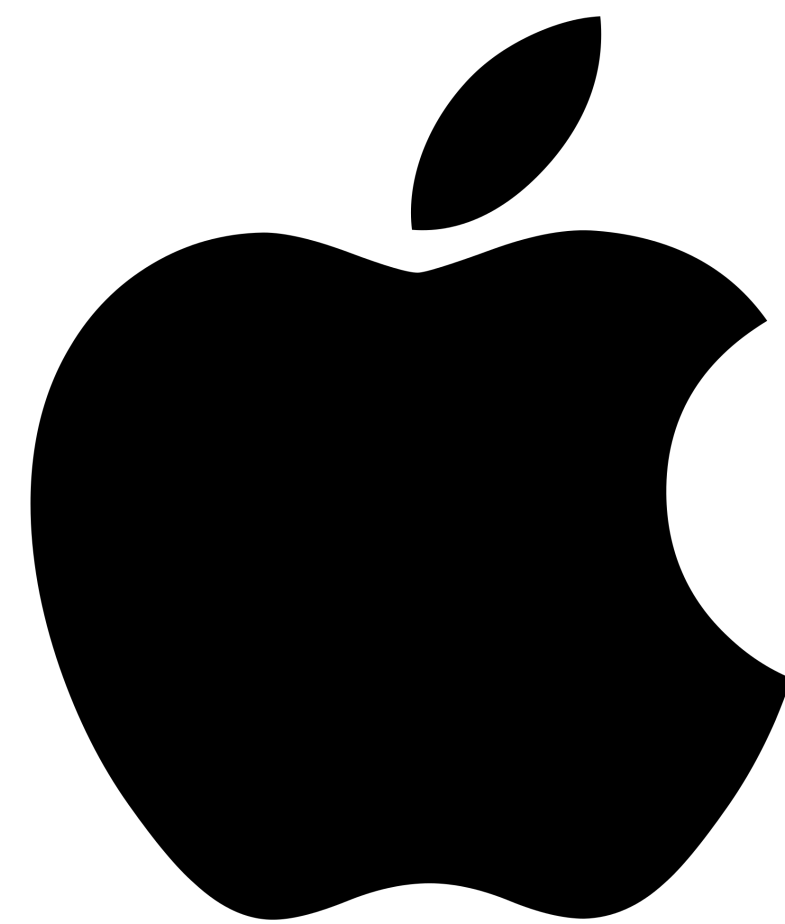

What is an OS?

An OS stands for Operating system and acts as the boss of the computer and tells it what to do and keeps every single part of the computer in check and ensures they all work and it safe for them to operate. It acts as the bridge between you, your programs and the physical components of your computer or phone, handling memory, files, security and processing power.

“SinkOS couldn’t remain the same”

The wisest of the wisest old men

**Apple partnering with Google and
Nvidia for most advanced AI model**

**Microsoft bets big on AI in Australia
with \$18 billion investment**

They are investing A LOT into AI

Microsoft has a problem: nobody wants to buy or use its shoddy AI products — as Google's AI growth begins to outpace Copilot products

Companies are failing to keep up with AI's identity sprawl,

The Boom of AI is Behind the Surge in RAM Prices

The AI boom is driving major price hikes for consumer electronics as AI chipmakers take first dibs on critical memory hardware.

138%

RAM prices are up

100%

Consumer GPU prices are up

To move forward

Sink OS will need to:

Introduce AI

Fresher UI

Add new features

But most importantly

Sink OS needs to remain one of the most secure browser based operating systems in the world.

SinkOS_{v2}

Accounts + cross platform
working

Accounts + cross platform working in SinkOS

Now, with this update, you will be able to create an account within SinkOS. This will allow you to log into Sink OS regardless of device. This will also let you work on whatever you were doing. You could be writing a document on your laptop, and sign in on your phone and continue on where you left off GIGITY GIGITY

Security

Security

Typescript integration

- When you log in, Sink OS will use a language called TypeScript instead of JavaScript
- This prevents a thing called JavaScript Hijacking

A large blue square with rounded corners, containing the letters 'TS' in a bold, white, sans-serif font. The 'T' and 'S' are positioned side-by-side, centered within the square.

✨ Story time ✨

You accept it.

CONGRATS!

Your data is now stolen :P

What Typescript does

What TypeScript does is ensure that the data is sent in a way that CAN'T be in a way where data can be stolen, it's a massive leap in the right direction, to ensure Sink OS remains secure.

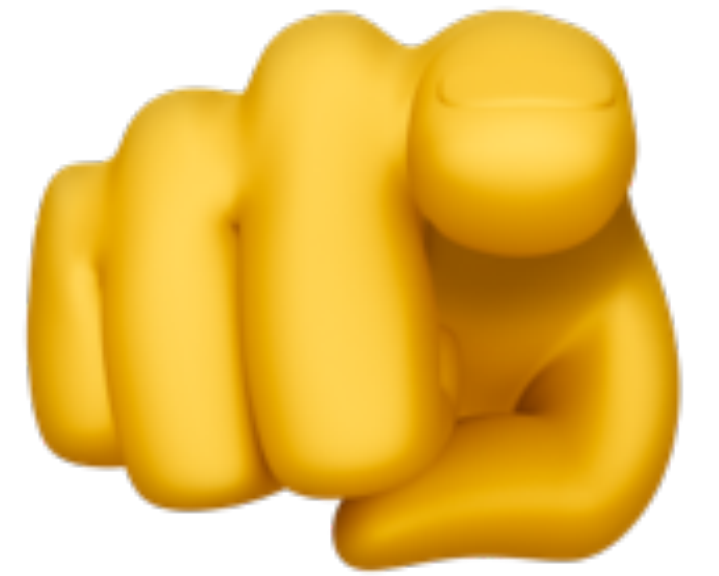

AI

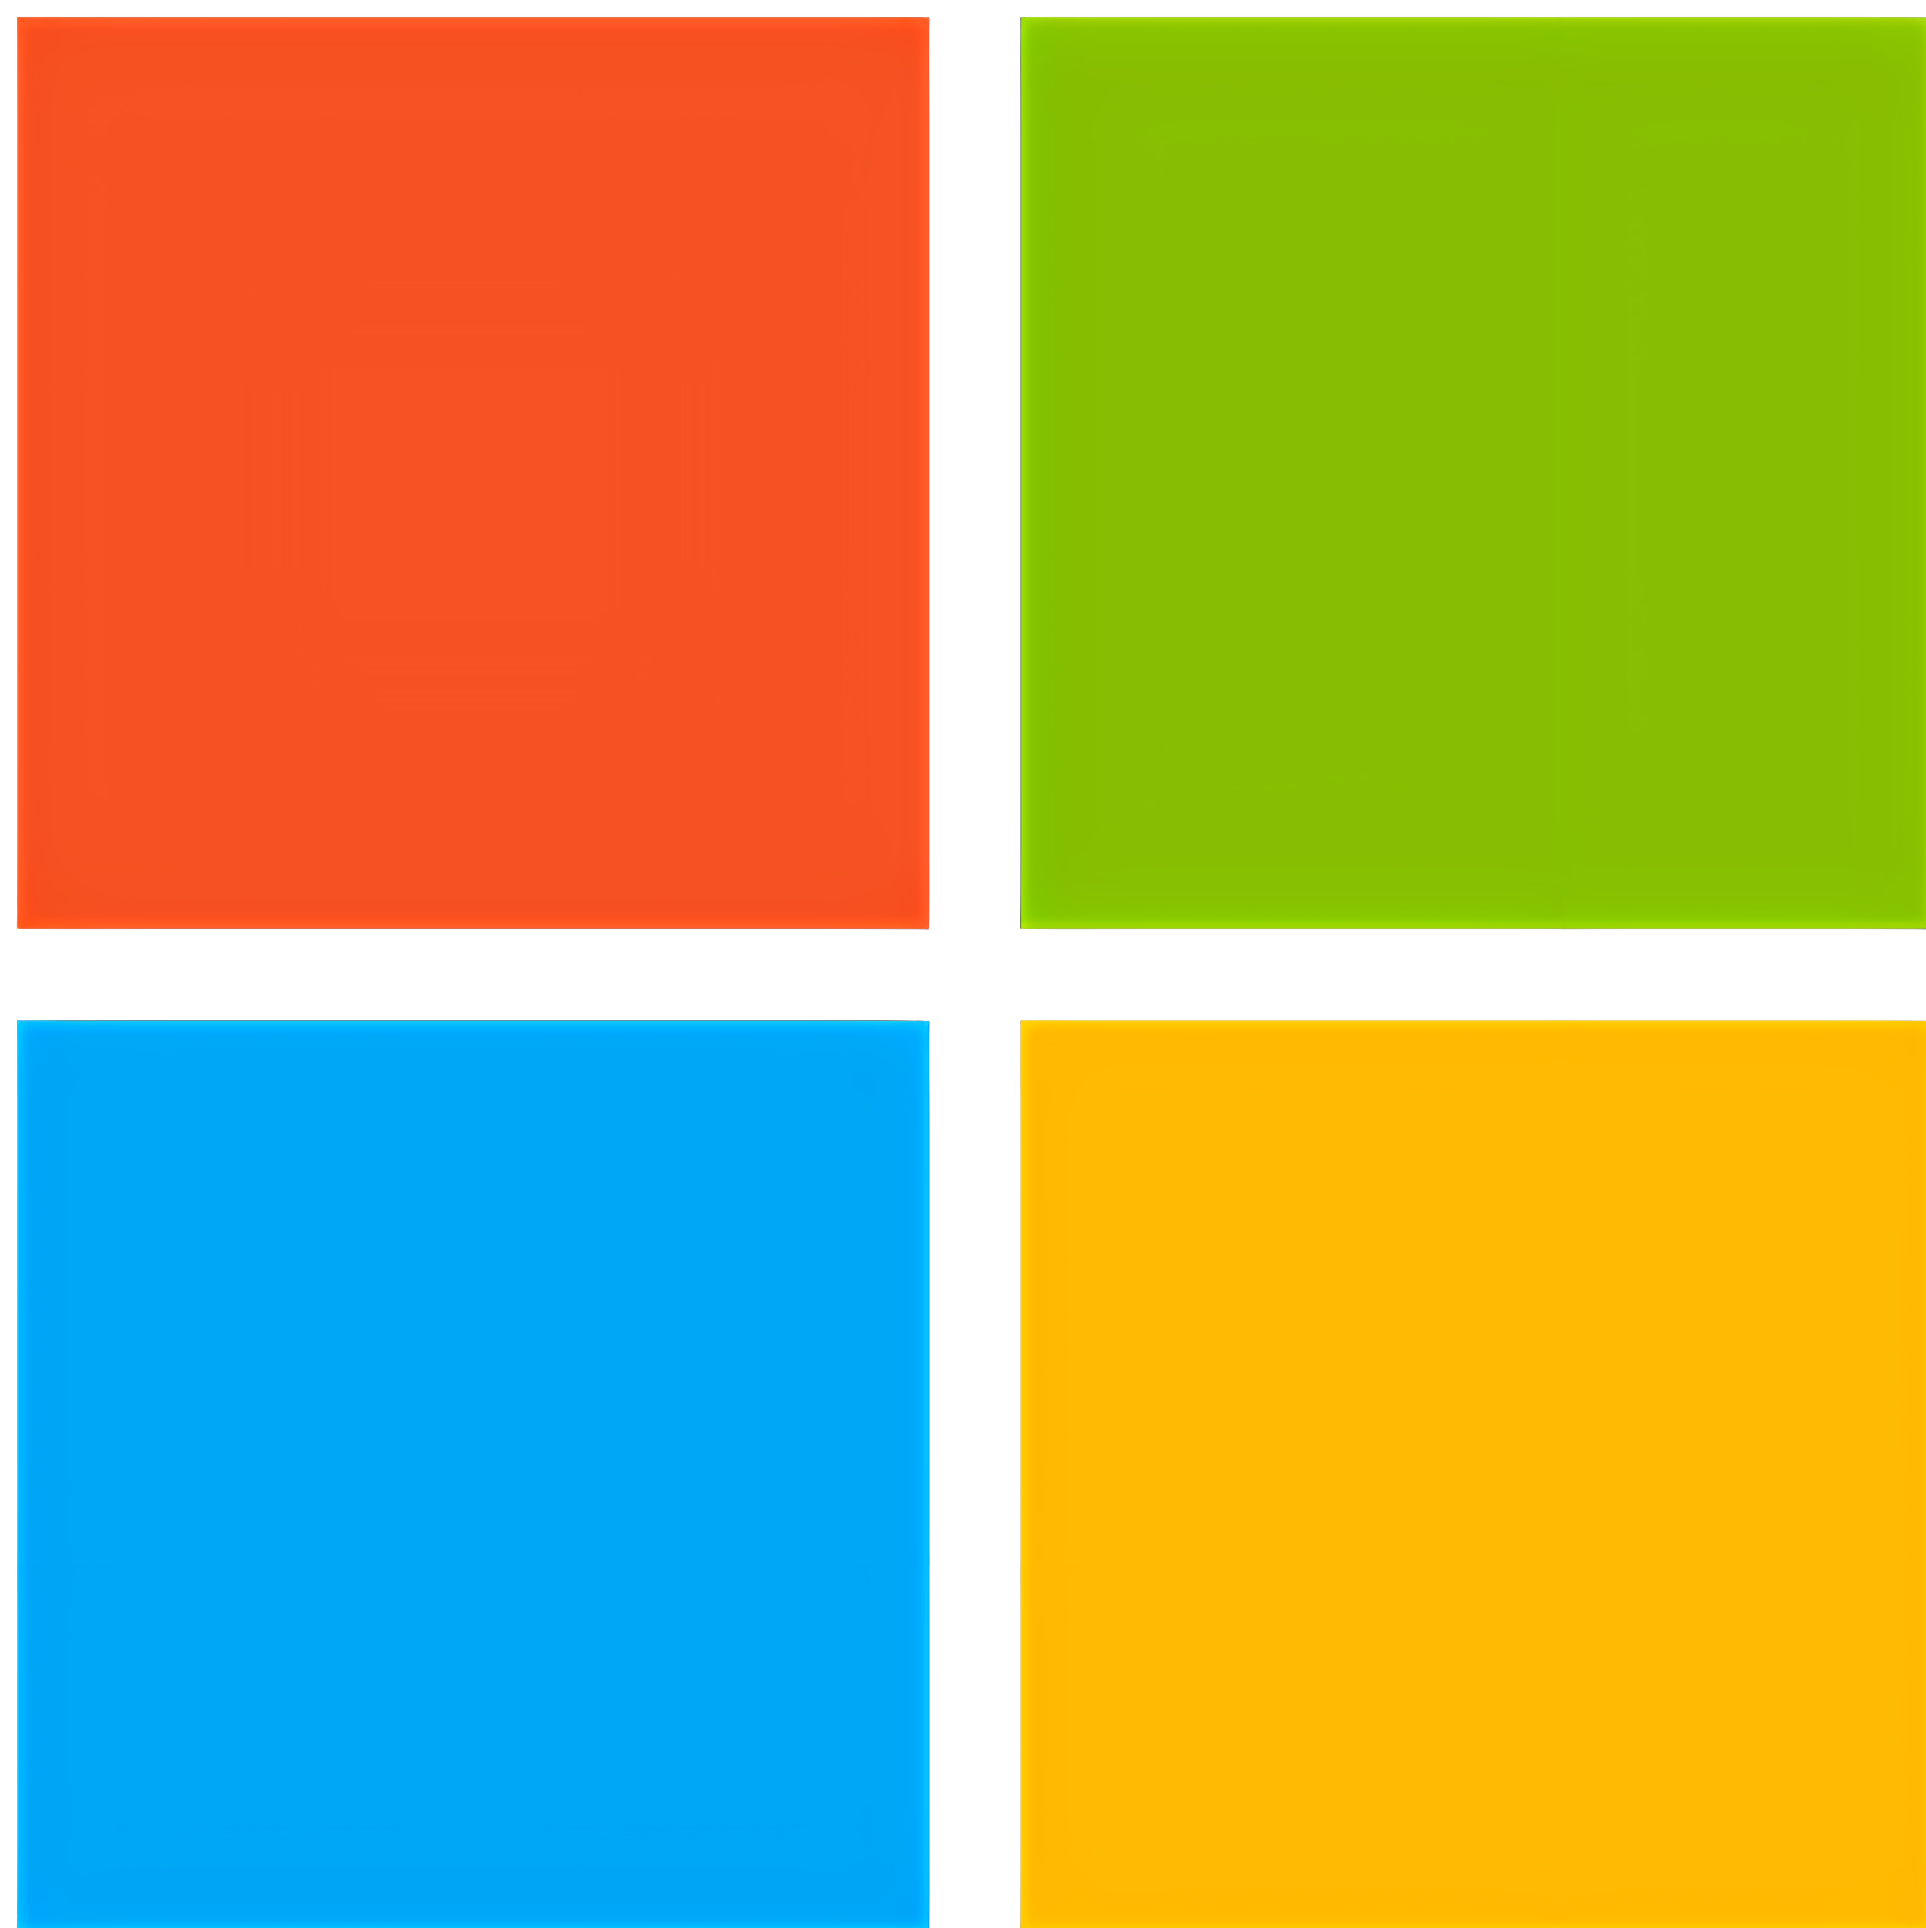

SinkOS + AI

This year, Sink OS introduces AI. There are many ways we could have sourced the AI. We could've gone to Microsoft and gotten the API and code for Copilot, or we could've gone and done the same with OpenAI and ChatGPT.

YOU GUYS

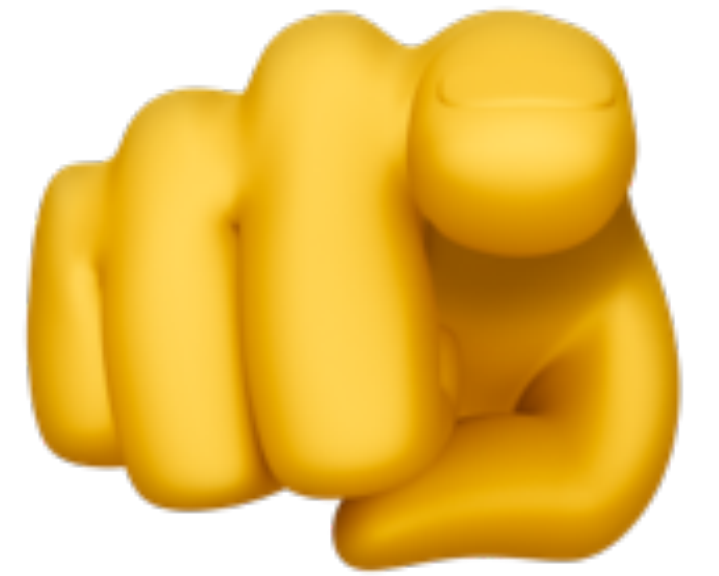

SinkOS was popularised by

YOU GUYS

SinkOS was popularised by

AI in SinkOS

here's what we did

- **Built it off of Google Gemini**
- **Built how it looks and acts all from scratch**
- **No company assisted us in this**

NEXUS

Spotify + SinkOS

Spotify in SinkOS

Ooooh!

- **Listen to all your favourite songs from Spotify in SinkOS**
- **You can create playlists on Spotify right from SinkOS!**
- **Be more productive! Or just vibe with the music, up to you**

**Who else is in their prime and not even
in their final form**

Refreshed UI + faster boot-up
times

A new, revamped UI

Ooo

- **Retains familiarity with SinkOS v1**
- **Newer**
- **Fresher**
- **More transparent.**
- **Easier on the eyes**

Future

Future

New SinkOS versions!

SinkOS Home V3

SinkOS Pro V3

SinkOS Ultra V3

But at the top of it all...

VMAX V3 stands for Version Maximum Version 3
